Supplementary Figure S1. KEGG pathways of cancer. The Functional Class Scoring (FCS) method implemented in GSEABase was used for KEGG pathway analyses as described in the Materials and Methods and a P-value of < 0.05 identified the significant pathway category.
Supplementary Figure S2. KEGG pathways of leukocyte endothelial transmigration. The Functional Class Scoring (FCS) method implemented in GSEABase was used for KEGG pathway analyses as described in the Materials and Methods and a P-value of < 0.05 identified the significant pathway category.
Supplementary Figure S3. KEGG pathways of focal adhesion. The Functional Class Scoring (FCS) method implemented in GSEABase was used for KEGG pathway analyses as described in the Materials and Methods and a P-value of < 0.05 identified the significant pathway category.
