

## **Reviewer's report**

**Title:** Computer use and stress, sleep disturbances, and symptoms of depression among young adults - a prospective cohort study

**Version:** 2 **Date:** 18 September 2012

**Reviewer:** Bengt Arnetz

### **Reviewer's report:**

The authors have been responsive to my comments, and addressed my concerns. They have provided reasonable arguments when they have decided not to follow the reviewer comments or suggestions.

The statistical approach now controls for baseline risk factors as well as models the possible impact on results by including or deleting the symptomatic group at baseline.

The discussion section is tighter and more focused on results achieved.

Overall, the authors have done a good job.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

### **Declaration of competing interests:**

I declare that I have no competing interests.
