Title: Evaluation of Pharmacological Activities and Assessment of Intraocular Penetration of an Ayurvedic Polyherbal Eye Drop (Itone™) in Experimental Models

Version: 1 **Date:** 20 September 2012

Reviewer: Kam-Lun Ellis Hon

Reviewer's report:

The research is interesting and important in its field.

My only problem is that the numbers of animals and controls are relatively small.

The conclusions will be more sound if these numbers can be increased to 10+ in each group

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
