Reviewer's report

Title: Stroke and plasma markers of milk fat intake - a prospective nested case-control study

Version: 4 Date: 2 April 2009

Reviewer: Pierre Astorg

Reviewer's report:

The revised manuscript by E. Warensjö et al. has taken into account all the points I had raised, and modified the text and the tables accordingly. The authors also brought explanations on unclear points.

Last form correction : two last lines of Results, page 9, write : "When examining the association of 17:0 in phospholipids with stroke in women, adjustment ...had virtually no effect on the odds ratios (table 3)."

Including this correction, I consider this manuscript as suitable for publication.
