Reviewer's report

**Title:** The Breast Feeding Mother and Xenon Anaesthesia: Four Case Reports Breast Feeding and Xenon Anaesthesia

**Version:** 2  **Date:** 28 January 2010

**Reviewer:** Jan-Hinrich Baumert

**Reviewer's report:**

The authors have addressed most of the concerns adequately. There are a few minor points left:

Minor essential revisions:

Methods, p4, 3rd par.: If really none of the patients received midazolam, it doesn’t need not to be mentioned, so omit the last sentence.

Methods, p5, line 15: Please add the unit (breaths per minute) to the ventilator frequency.

Reference List: there are still some spelling errors (e.g., ref. 10, 14, 20), and the font is not uniform. Remember that RefMan is only as good as the database entries. Please correct.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
