Reviewer's report

Title: Impact of perioperative RSV or influenza infection on length of stay and risk of unplanned ICU admission in children: a case-control study

Version: 2 Date: 28 July 2011

Reviewer: Kam-lun Ellis Hon

Reviewer's report:

1. The investigators still have not added information on parainfluenza
2. The number of references are small. Recent publications on respiratory viruses and post-op +/- PICU admissions should be inconcluded.
