Reviewer's report

**Title:** TIP peptide inhalation in experimental acute lung injury: effect of repetitive dosage and different synthetic variants

**Version:** 2  **Date:** 24 April 2014

**Reviewer:** Tyler J Wellman

**Reviewer's report:**

The revised version of the manuscript is a major improvement over the original version, and the authors have satisfactorily addressed all of my initial concerns. I believe the new data analysis, including changes in EVLWI over time in each group, provide new insight regarding the authors’ hypotheses. The authors have adjusted their interpretation of the data accordingly, and the more conservative language used in the discussion is appropriate. I have no further criticisms of the manuscript.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
