Reviewer's report

Title: Glucose Prediction by Analysis of Exhaled Metabolites - a Systematic Review

Version: 2 Date: 25 March 2014

Reviewer: David Bruns

Reviewer's report:

My view of this paper is unchanged from before. I see no major flaws, but remember that I am not an expert on breath analysis.

Acceptance of this paper is an editorial decision. My feeling was that the paper would be of limited interest as it is a review of studies that are all very preliminary. But that is an editorial decision which I would not presume to make.
