Reviewer's report

Title: Efficacy and safety of a two-step method of skin preparation for peripheral intravenous catheter insertion - a prospective multi-centre randomised trial

Version: 2 Date: 29 January 2007

Reviewer: Francisco Alvarez-Lerma

Reviewer's report:

General
I consider that the authors have correctly addressed my previous comments, but the study still lacks of relevant scientific merit and the interest for the readership of BMC Anesthesiology is limited.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)
