Reviewer's report

**Title:** Cor Triatriatum Sinister diagnosed in adult life with three dimensional transesophageal echocardiography

**Version:** 1  **Date:** 3 September 2010

**Reviewer:** Kalgi Modi

**Reviewer's report:**

1. Good paper with a clear message.
2. Figure 2 is not very clear and to me more appears like a image of a Secondum ASD. Image with left antecubital vein contrast injection would be helpful for persistent left SVC.
