Reviewer: R Hetzer

Reviewer's report:

Review of Double auricles of the right atrium: a unique anatomic deformity

The manuscript is well-written and concise. The presence of an extra auricle of the right atrium presents neither hemodynamic nor functional and clinical significance. It is doubtful if this is of any interest to the readers. However, as an addition to the existing literature, it may be published. The reference that they cited should read as Ankersmit HJ, Loewe C, Hacker S, Hoetzenecker K, Grimm M. Wien Klin Wochenschr. 2008;120(5-6):152, not as Ankhersmith. Since this reference has no bearing to the anomaly they are reporting, I suggest that the authors do not cite this.

Summary of review:
Minor essential revision
An article of limited interest
Acceptable quality of written English
Statistical review is not necessary

Declaration of competing interests:
I declare that I have no competing interests.

Thank you for this opportunity to review this article.
