Reviewer’s report

Title: Double auricles of the right atrium: a unique anatomic deformity

Version: 1 Date: 23 December 2010

Reviewer: Rainer G.H. Moosdorf

Reviewer’s report:

Major compulsory revisions:
As a short communication, this article may be interesting to show a rare anatomical aberration. However, the description should be more precise and even an experienced cardiac surgeon can hardly recognize the anomaly on the one and only picture.
Propably this picture might benefit from some arrows and also, one picture from the echo-investigation might be helpful for a better understanding.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
