Reviewer's report

Title: Factors affecting diagnosis and management of hypertension in Mazowe District of Mashonaland Central Province in Zimbabwe

Version: 2
Date: 7 December 2013

Reviewer: benjamin longo-mbenza

Reviewer's report:

1. The Research Question posed by the authors was well defined and responded.

2. The methods were well designed and were appropriately and well described with validity and reliability.

3. The Data were outstanding and correctly analysed.

4. The paper did adhere to the relevant standards for interpreting, reporting and Data deposition.

5. The Discussion and Conclusions were well balanced and adequately supported by the Data.

6. The Limitations of the work were clearly stated.

7. The authors clearly acknowledged referenced studies.

8. The Title and Abstract did accurately convey what has been found.

9. The writing was acceptable.

In conclusion, I recommend this manuscript be published in condition to replace "Independent risk factors for hypertension" by Independent determinants(or associated factors) for hypertension. Indeed, the study was cross-sectional design without Temporality.
