Reviewer's report

Title: Impact of self-management interventions on stable angina symptoms and health-related quality of life: A meta-analysis

Version: 2 Date: 5 November 2013

Reviewer: Fabio Infusino

Reviewer's report:

- No major and minor revisions to make

- Conclusions

The authors emphasize the positive effect of self-management interventions on quality of life of patients with stable angina. However, further and well-addressed studies are needed to assess the prognostic impact of these interventions. The limitations of study are fully shareable.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
