Reviewer's report

Title: Aspirin Use and Knowledge in the Community: A Population- and Health Facility based Survey for Measuring Local Health System Performance

Version: 1 Date: 25 October 2013

Reviewer: Sadanori Okada

Reviewer's report:

Major compulsory revisions:
1. The authors described their study’s limitation in the discussion section as follows: “We note that our study population is from a single county and may not be generalizable to other regions.” It is difficult to prove the generalizability of their study, but it was very important point by which their study was evaluated. The authors should more precisely discuss about the generalizability of their findings.

2. In table 3, the authors displayed cardiovascular risk factors in people without history of cardiovascular diseases. They should described continuous variables as median (IQR) or mean (SD) for understanding their characteristics.

Minor essential revision:
1. There were incorrect number of references (ex. page 4, line 21; page 5, line 6; page 5, line 9 etc.). Please check all reference numbers and citations again.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
