Reviewer’s report

Title: Stable phase post-MI patients have elevated VEGF levels correlated with inflammation markers, but not with atherosclerotic burden.

Version: 3  Date: 7 September 2014

Reviewer: Agnieszka Cudnoch-Jedrzejewska

Reviewer’s report:

Major Compulsory Revisions
The definition of myocardial infarction should be added before further revision.
It is interesting why only 48% of patients were treated with ACEI?
I am concern about the definition of MI - should be according with ESC guidelines.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
