Assistant Editor
BMC Journals
Re: Myocardial Bridging and Acute Myocardial Infarction:
Dear Dr Collett,

As stated previously, this case report describing acute ST-segment elevation anterior MI in association with myocardial bridging and anemia is interesting. The submitted electrocardiogram is consistent with findings described, and I believe, it should be included in the final report. Patient’s descriptions from the top of the figure, however, should be deleted.

Seemingly, authors have made a conscious effort in improving their manuscript. In my opinion, the manuscript is not ready for publication in its current status. There still seems to be room for significant improvement, especially the quality of written English. But, I am also a firm believer of encouraging authors from different backgrounds to engage in scientific writings. Therefore, the authors should probably be given another opportunity to improve their manuscript before its publication. Thank you for giving me the opportunity to contribute to BMC Journals.
