Reviewer's report

Title: Diagnostic strategies for C-reactive protein

Authors:

Harriette Riese (h.riese@psy.vu.nl)
Tanja GM Vrijkotte (tgm.vrijkotte@psy.vu.nl)
Piet Meijer (p.meijer@pg.tno.nl)
Cees Kluft (kluft@euronet.nl)
Eco JC de Geus (eco@psy.vu.nl)

Version: 2 Date: 8 May 2002

Reviewer: Dr D McMillan

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept after discretionary revisions

Thank you for the opportunity to re-review this manuscript. The authors have adequately addressed my previous comments. My only remaining comment is that in table 1 the use of 3 decimals points in expressing age, BMI, smoking, alcohol use seems excessive. Indeed, the authors should consider their appropriate use throughout the manuscript including the expression of CRP.
