Version: 2 Date: 18 Mar 2003

Reviewer: A Salustri

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Unable to decide on acceptance or rejection until the authors have responded to the compulsory revisions

1. How long was the follow up period?
2. According to the new guidelines on the redefinition of myocardial infarction, patients with typical symptoms and elevated troponins are classified as AMI patients. The Authors should acknowledge this point and modify accordingly the statement at page 11, lines 3-7.
