Reviewer’s report

Title: Arrhythmia-provoking factors and symptoms at the onset of paroxysmal atrial fibrillation. A study based on interviews with 100 patients seeking hospital assistance

Version: 2 Date: 24 June 2004

Reviewer: John Godtfredsen

Reviewer’s report:

The revised MS now satisfies my earlier comments. Only I still think that the term "...divided up into as..." in the 1’st line of the background section is bad English. Also the word autonomous should be autonomic. That’s all.

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
