Reviewer's report

Title: Sry Delivery to the Adrenal Medulla Increases Blood Pressure and Adrenal Medullary Tyrosine Hydroxylase of Normotensive WKY Rats

Version: 2 Date: 20 February 2007

Reviewer: Maria Vieira-Coelho

Reviewer's report:

General
The authors have answer and clarified all major compulsory revisions proposed, the discussion is now much more complete and elucidating, and in fact the paper has been improved substantially. Minor changes were also correct. In conclusion, I am satisfied with the new version of the paper.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
-on results paragraph adrenal catecholamine content is presented in fmol/min/mg, this is not correct since tissue content is not time dependent.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
