Reviewer's report

Title: Are patients with non-ST elevation myocardial infarction undertreated?

Version: 2 Date: 18 December 2006

Reviewer: Daniela Balzi

Reviewer's report:

General
In this study some important informative variables (mainly co-morbidities) are not available and this is an important limitation of the manuscript.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-I suggest to delete the word "unselected" when the authors refer to this cohort, because, as stated in the "Limitations" paragraph, a selection bias may play a role in this study

-Pag. 7: substitute "due" to "duo"

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
