Reviewer's report

Title: Factors associated with poor prognosis among patients admitted with heart failure in a Nigerian tertiary medical centre: a cross-sectional study

Version: 4 Date: 22 June 2008

Reviewer: Christian Torp-Pedersen

Reviewer's report:

The revised manuscript has dealt with each comment I made to the initial manuscript.

The remaining problem is - as the authors acknowledge - patient selection. The sample could be biased and not represent the disease in the population.

Nevertheless, it is important to know the presentation of heart failure in developing countries and for many years to come we will not be able to require reports from these countries to represent population samples or very large numbers.

The disease pattern demonstrated in this report is interesting and reflect a very different pattern than that found in developed countries.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests
