Reviewer's report

Title: Health-related quality of life after myocardial infarction: the role of left ventricular function

Version: 1 Date: 21 April 2008

Reviewer: David R Thompson

Reviewer's report:

1. Can LVEF ever predict HRQoL or is it just an association; if it can is it the LVEF or the cardiac event itself?
2. What are the clinical implications of these findings?
3. Why did the authors use the EQ-5D and not the SF-36 or SF-12? Also, what about the Visual Analogue Scale of the EQ-5D - was this used and, if so, where are the data, and if not, why?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
