Reviewer's report

**Title:** Left ventricular non-compaction: clinical features and cardiovascular magnetic resonance imaging

**Version:** 2 **Date:** 19 May 2009

**Reviewer:** giovanni Fazio

**Reviewer's report:**

In this second form the study can be accepted, but, in my opinion, is important to write in the study limitation section that the most important limit is the selection of the patient, that was chosen from a population referred to magnetic resonance for dilated cardiomyopathy. This is important because can explain the different incidence of many complication that are very more common in this part of patient affected by non compaction.
