Reviewer's report

Title: Variation in the human soluble epoxide hydrolase gene and risk of restenosis after percutaneous coronary intervention

Version: 1 Date: 8 July 2009

Reviewer: gilberto vargas-alarcon

Reviewer's report:

Minor Essential Revisions

1.- The observed and expected frequencies of the polymorphism are in Hardy-Weinberg equilibrium?. Please include this information and the test used for the analysis. If the data are not in H.-W equilibrium, the authors should discuss this information.

2. - All the presented data are not agree with previous studies, so more information about the differences with previous studies should be included in the discussion section (ethnic, diagnostic differences, etc.).

Discretionary revisions

1. - In my opinion the figure 1 is not necessary and should be deleted.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
