Reviewer's report

Title: Fatal accidental methanol ingestion

Version: 4 Date: 26 August 2009

Reviewer: Ryosuke Tsuruta

Reviewer's report:

Minor Essential Revision

I am interested in the article of severe methanol intoxication. However, I have some questions.
1) Why was the toxicology screening for methanol negative? Could you give me the explanation?
2) Why not include the good paper about visual disturbance due to methanol intoxication of Fujita M, et al.
3) How about the head CT scans on ER arrival if you have it?

Minor Points
3 of HCO3-, down.
Osmol gap is 73 instead of 77 in the context.
Use point (comma) instead of period for the number.
You should choose which gram/L or g/L.
In the figure 2, concentration gram/L instead of mgram/L

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
