Reviewer's report

Title: Acute Mercury Poisoning: A Case Report

Version: 6 Date: 9 December 2009

Reviewer: Herman Jones Gibb

Reviewer's report:

Major Compulsory Revisions:
(1) The authors need to provide a reference for the normal range of "0 and 10 ug/dL". That range seems very high. Also, a range is not "0 and 10 ug/dL". It should be stated as 0-10 ug/dL.

Minor Essential Revisions:
(1) The authors have provided a table which is presumably not a result of their work. A reference for the table should be provided.
(2) What are "preprogrammed training sessions" (last sentence of manuscript)? Perhaps the sentence could simply read "Training is recommended for school children and teachers...."

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
I declare that I have no competing interests.
