Reviewer’s report

Title: Acute Mercury Poisoning: A Case Report

Version: 6 Date: 7 November 2009

Reviewer: Larissa Velez

Reviewer’s report:

Major revision:
the list of chelators at the end of the manuscript includes items that are NOT used for mercury - like deferoxamine and prussian blue. These other chelators should not be listed alongside the commonly accepted ones used for mercury.
Discretionary: maybe a short explanation on why NAC was used as a chelator. WE do not want to mislead people in thinking NAC isa commonly accepted (first line) chelator for mercury toxicity.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
