Title: Impact of physical fitness and biometric data on the quality of external chest compressions: a randomised, crossover trial

Version: 5 Date: 31 August 2011

Reviewer: Davide Cattano

Reviewer's report:

There are few items that needs to be addressed. All figures are reported as mean plus/minus SEM instead of SD, and the authors request to use the format for presentation purposes. However they do not provide the p value and the number of subjects. Each table/figure should list appropriately the number of subjects and the p value, and refer by asterix or other symbol (if more than two groups) which are different.
