Title: Role of an anesthesiology curriculum in improving bag-mask ventilation and intubation success rates of emergency medicine residents: a prospective descriptive study

Version: 3 Date: 22 October 2010

Reviewer: Maaret Castren

Reviewer's report:

I would prefer the authors to write in the article the abbreviations the first time, it is not usual to have them like they present them. And I still dont understand the answer to my ethical question, they did an intervention on the patient, that is why they needed an approval, this should be stated and not write about the curriculum as an ethical problem.
