Reviewer's report

Title: Using qualitative synthesis to explore heterogeneity of complex interventions

Version: 2 Date: 9 March 2011

Reviewer: Claire Glenton

Reviewer's report:

I have now gone through the article once again, and believe that the authors have responded sufficiently to my original criticisms. The paper could still benefit from one last go at the language, which is at times unnecessarily clumsy. The authors' use of the word "however" could for instance be minimised! Other than this (discretionary) revision, I am happy to recommend its publication.
