Reviewer's report

Title: A worked example of "best fit" framework synthesis: A systematic review of views concerning the taking of potential chemopreventive agents

Version: 3 Date: 11 February 2011

Reviewer: James Thomas

Reviewer's report:

An already helpful paper has been strengthened by the amendments made. While I still would have liked to have seen more about the selection of data (e.g. I've found that the discussion and conclusions often contain additional new data!), it would be churlish to suggest another revision over this point. I'm sure many people will find this paper to be a valuable addition to the literature.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
