Reviewer's report

Title: Intervention dose estimation in health promotion programmes: a framework and a tool. Application to the PRALIMAP trial.

Version: 5 Date: 27 July 2012

Reviewer: Jonathan Graffy

Reviewer's report:

The authors have responded to the comments in a satisfactory manner. There are now just a few minor points that need attention:

Minor essential revisions:
1) Double comma page 15.
2) In the abstract quality and quantity are referred to as domains, elsewhere they are referred to as declensions. The authors need to check for consistency in using these terms throughout the paper.
3) It is good to have examples of non-intervention activities (p.8), but the sentences do not read well and need re-writing.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
