Reviewer's report

Title: The selection of search sources influences the findings of a systematic review of people's views: a case study in public health

Version: 2 Date: 9 March 2012

Reviewer: Patricia Lucas

Reviewer's report:

I'm happy with changes made to this paper, its aim and purpose are now clear.

I would still prefer that some description of the search strategy were included - the advantage of online publication is exactly the ease of supplying this kind of supporting information rather than readers having to cross refer between papers. As a systematic reviewer I particularly value this feature!

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests
