Reviewer's report

Title: Choice of observational study design impacts on measurement of antipsychotic risks in the elderly: a systematic review

Version: 2 Date: 23 February 2012

Reviewer: Emilio Sacchetti

Reviewer's report:

Our opinion is that Authors have properly met all suggestions. We have no major compulsory revisions. Just one revision about the quotations in the limitations section that goes from “… different patient population … “ to “similar results to RCTs”, where the references reported are:
