Reviewer's report

Title: Tracking type specific prevalence of human papillomavirus in cervical pre-cancer: a novel sampling strategy

Version: 1 Date: 1 September 2011

Reviewer: Antonella Agodi

Reviewer's report:

The manuscript entitled "Tracking type specific prevalence of human papillomavirus in cervical precancer: a novel sampling strategy" would be relevant and of interest to the readership and the object is attractive and well defined. However, it is essential that this manuscript be seen by an expert statistician regarding methodological issues. Furthermore, I suggest to discuss possible limitation of the methods used in the study.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
