Reviewer's report

Title: Improvement of maternal Aboriginality in NSW birth data

Version: 3 Date: 10 October 2011

Reviewer: Steven Guthridge

Reviewer's report:

The authors have accommodated my concerns, however have added excessive detail in a number of areas, in particular there are now 2 pages of discussion devoted to an unnecessary outline of capture/recapture methods. The paper needs some editing, to remove excessive detail and improve continuity.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
