Reviewer's report

Title: A framework for power analysis using a structural equation modelling procedure

Version: 5 Date: 11 November 2003

Reviewer: Keith Widaman

Reviewer's report:

General

The author carefully responded to each and every comment I made on the previous version of the ms. I then read this second version of the ms. and find that I have no comments at all on this version -- aside from "job well done." The revisions to the ms. corrected all of the problems I had found in the ms. Now, the ms. provides a very useful addition to the literature, and I trust that persons in the Biomed Central community will benefit from the methods and procedures discussed.

Discretionary Revisions (which the author can choose to ignore)

Minor Compulsory Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
