Reviewer's report

Title: An investigation of minimisation criteria

Version: 2 Date: 22 February 2006

Reviewer: Marion Campbell

Reviewer's report:

General
The resubmission has taken into account all the points raised in a satisfactory manner

----------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The y-axis on Figure 3 is still not consistent with the others (it should start at zero and progress in jumps of 0.5 to be consistent with the others)

----------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:
