Reviewer’s report

**Title:** Use of the Oxford Handicap Scale at hospital discharge to predict Glasgow Outcome Scale at 6 months in patients with traumatic brain injury

**Version:** 2  **Date:** 12 September 2008

**Reviewer:** Ingrid M Emanuelson

**Reviewer’s report:**

The research question is well defined by the authors, and the methods well described apart from one little comment. In the abstract the authors state that the GOS measurement is time consuming. I am not willing to agree. I would like to have that explained.

The limitation of the work is otherwise clearly stated. The data seem sound and the statistical calculations are well carried out in great detail.

The writing is acceptable apart from my comment above.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
