Reviewer’s report

Title: Current use of medical eponyms - a need for global uniformity in scientific publications

Version: 2 Date: 15 November 2008

Reviewer: fernando Herbella

Reviewer’s report:

The authors studied an interesting theme, medical eponyms. They addressed very well the controversy that exists in the literature regarding the use or not of eponyms. However, the authors focused their manuscript in linguistic variants of eponyms using Down syndrome as a model. We believe that this discussion is minor and do not contribute significantly to the controversy of eponym usage.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
