Reviewer's report

Title: Quality of Reporting Internal and External Validity Data from Randomized Controlled Trials Evaluating Stents for Percutaneous Coronary Intervention

Version: 2 Date: 27 February 2009

Reviewer: Adrian V. Hernandez

Reviewer's report:

I am pleased with the answers to my comments, and the revised paper is better than before. Authors showed that the message of the paper did not change after reviewing RCTs of almost 3 years more, but results are more robust.

Minor essential revision: IQR is still present in abbreviations, First, second and last paragraphs of results, and Table 2. I suggest using Q1 to Q3 only all over the text.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
