Reviewer's report

Title: Variation in plasma calcium analysis in primary care in Sweden - a multilevel analysis.

Version: 2 Date: 26 April 2010

Reviewer: Claudio Marcocci

Reviewer's report:

the authors have dealt with my comments and I have no objection for the publication of the manuscript. Although the scope of the study was not that of giving information on serum calcium I still feel that these information (since it is available) could be added in the paper. The authors decided not to do it. I am Ok, as long as you are happy of their revision regarding the points raised by the other reviewers.
