Reviewer's report

Title: Is chronic pelvic pain a comfortable diagnosis for primary care practitioners: a qualitative study

Version: 1 Date: 22 August 2009

Reviewer: Alan Breen

Reviewer's report:

This paper adds to the literature on the management problems that common conditions pose for the NHS. However, the authors should describe the theoretical framework for their study more explicitly, and say if there were any inclusion or exclusion criteria or not. They should also describe how framework analysis was used in this study and list (at least) the themes in a table.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
