Reviewer’s report:

Statistician’s Report

Although there is no original hypothesis and power calculation, I believe the samples size is large enough. I have checked the analyses and found:

1. 11851/52 versus 8724/33: p=0.050
2. 11466/91 versus 8643/34: p<0.001
3. 11151/52 versus 11466/91: p=0.002, and
4. 8724/33 versus 8643/34: p=0.0873

Therefore I find the data of table 1 to be correctly analysed and that the conclusions cannot be faulted from a statistical viewpoint.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
