Reviewer's report

Title: Preventing childhood obesity in UK primary care: a mixed-methods study of HCPs knowledge, beliefs and practice

Version: 1 Date: 12 April 2011

Reviewer: MATEJA BULC

Reviewer's report:

The question posed by the authors is well defined, the methods are appropriate and well described. The data are sound, the manuscript adheres to the relevant standards for reporting and data deposition. The discussion and conclusions are well balanced and adequately supported by the data, limitations of the work are clearly stated.

The authors clearly acknowledge all works upon which they are building, both published and unpublished.

The title and abstract accurately convey what has been found. Therefore I think that the writing is acceptable.

No minor revisions are compulsory.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
