Reviewer’s report

Title: Age- and Gender-related Prevalence of Multimorbidity in Primary Care: the Swiss FIRE Project

Version: 3 Date: 6 August 2012

Reviewer: Martin Fortin

Reviewer’s report:

The original issues have been addressed and the manuscript has improved since the revision.

However, I have noted a few other minor details that would enhance the quality of the paper if they are addressed:

1. The paper should include “prevalence” in the list of key words because it is the main subject.
2. In Figure 1, the numbers in thousands are still separated by an apostrophe. I suggest using commas instead as appropriate in English.
3. In Author’s Contributions, for all authors who qualify as such, a sentence saying that all authors gave their final approval of the version to be published should be included.

In conclusion, I recommend publication.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
