Reviewer's report

Title: Heart failure patients’ experiences with continuity of care and its relation to medication adherence: a cross-sectional study

Version: 2 Date: 7 December 2011

Reviewer: Kathleen Bennett

Reviewer's report:

Most of the previous reviewers comments have been addressed.

Some issues around the power of the study were not directly addressed, but instead the reader is referred to another article (in BMC HSR) where more details are available. However, this paper only provides post-hoc retrospective power calculations for the specific study being examined and does not relate to the current study. This is not really an adequate response.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
