Reviewer’s report

Title: Cost-effectiveness of Problem-Solving Treatment in comparison with usual care for primary care patients with mental health problems: a randomized trial

Version: 3 Date: 25 July 2012

Reviewer: Gerry Richardson

Reviewer’s report:

OK, the paper is better now. However, I still have one concern which could be easily addressed.

I am aware of the use of EQ5D to calculate QALYS. However, I want to see EQ5D scores at each follow up point so that I can see the pattern of changes in scores and also to informally replicate the QALY figures.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
